CSC648/848 - Software Engineering Section #1

LAST CALL

Team 07

Team Members: Luis Acuna Mendez, Joocho Chang, Gwangwoo Lee, Leslie Mora

Ponce, Dorrie Shen, Vedang Sakxena

Milestone 3

November 1st, 2023

Appendix I

Section: #1 Team: 07 Date: 11/01/2023

Number of students present: 6

1. UI and functionality feedback (P1 functions only):

Instructor's comments on UI/functionality for your demo:

- The application's Unique Selling Point (USP) is not prominently communicated within the user interface.
- Professor recommended giving higher visibility to the Price point, emphasizing both the actual rate and the discounted rate.
- Additionally, enhancing the visual appeal of the application can be achieved by incorporating more high-quality images of the available food items.
- Filling the blank spaces strategically will contribute to a more attractive and engaging user experience.
- Furthermore, a refinement of the homepage's layout is advisable to create a more user-friendly and aesthetically pleasing interface.

In response to the valuable feedback provided by our esteemed professor, we are committed to implementing the following strategic improvements:

- Enhanced Problem Showcase: Our foremost objective is to provide a more comprehensive and compelling depiction of the issue at hand, which is the significant reduction of excessive food wastage in restaurants. By shedding more light on this problem, we aim to underline the social and environmental significance of our application.
- Focused USP Highlight: The Unique Selling Proposition (USP) of our application is its remarkable ability to offer users the opportunity to purchase restaurant food at a substantially reduced cost. We recognize that this price advantage will serve as the central and defining feature of our platform, and we will ensure its prominent presentation.
- Optimized User Interface: We are dedicated to enhancing the foundational layout of our application to maximize its aesthetic appeal. This will entail the incorporation of high-quality images of food items, accompanied by detailed

descriptions. Our goal is to create an engaging and satisfying user experience that resonates with our target audience.

2. List of P1 features committed for delivery–

Search Bar

- The users shall search the restaurants by restaurants' name.
- The users shall search the restaurants by area.
- The users shall search the restaurants by food category.

Log In

- The users shall log in using their account.
- The users shall log in by their other platforms such as google, facebook, instagram.

Sign Up/LogOut

- The users shall create an account.
- The users shall log out their account.

List of Restaurant

- The users shall see all the restaurant lists.

Order History

- The Users shall check a record of their past orders.
- The Users shall be able to see their current order.

Show How much money we saved.

- The users shall check the amount of money that users have saved by using our platform.

Restaurant Food Stocks.

- The users shall add their food stock.
 - The users shall check other restaurants' stocks.

Open Now

- The users shall check the restaurant's name that is open now.
- The users shall use this point to get a discount for their next purchase.

3. Project status –

a) Status of the application:

- The project is presently in the 'prototype stage'.
- It is showcasing a functional user interface (UI) and the initial integration of select backend features.
- It is important to note that a significant portion of the project's feature set remains to be implemented, with the objective of achieving full completion before reaching Milestone 5.
- Our diligent efforts are directed toward expanding and refining the project to fulfill all designated requirements and deliver a comprehensive solution to our stakeholders.

b) Risks associated with the project:

- As we reach the midpoint of our project, it is important to acknowledge that the pressure to meet project milestones and deadlines will continue to mount. To address the challenges we face, we have put in place the following strategies:
- Scheduling Risks Mitigation: Our team members are currently managing demanding schedules that extend throughout the week. To safeguard their well-being and maintain optimal productivity, it is imperative that we respect their individual timetables. We are committed to preventing the imposition of excessive workloads, as this can negatively impact performance and project outcomes.
- Promoting Effective Team Collaboration: Collaborative work, while essential, can sometimes lead to interpersonal conflicts that may hinder project progress. To mitigate this risk, we have established a culture where every team member's perspective is not only acknowledged but also carefully considered. Our team leader plays a pivotal role in fostering open and constructive communication. We encourage team members to openly

discuss and resolve any issues, ensuring that they are addressed proactively to prevent any adverse impact on our overall project advancement.

- These measures underscore our commitment to maintaining a healthy balance between productivity and well-being, as well as fostering a collaborative environment where the value of each team member's contributions is upheld. We appreciate the dedication of our team and are determined to overcome the challenges that lie ahead.
